

QA Engineering Intern Assignment

Exploratory Manual Testing Report for Safora Website

Prepared By: Steffani Silva

Position Applied: QA Engineering Intern

Date: May 16, 2026

Acknowledgments

I would like to express my sincere gratitude for the opportunity to complete this QA Engineering Intern assignment. This assignment provided valuable practical exposure to exploratory testing, test case documentation, and basic UI automation testing techniques.

I would also like to thank the Safora team for providing the testing environment and allowing candidates to demonstrate their analytical and quality assurance skills through a real-world scenario.

Completing this assignment helped strengthen my understanding of manual testing practices, website usability evaluation, responsiveness testing, and software quality assurance fundamentals.

Abstract

This document presents the exploratory manual testing activities conducted for the Safora website as part of the QA Engineering Intern assignment. The objective of this testing process was to evaluate the functionality, usability, responsiveness, and overall user experience of the website.

The testing covered multiple functional areas including homepage behavior, navigation functionality, feature sections, contact form validation, responsiveness across devices, and general interface consistency. Test cases were designed and executed to identify potential issues and verify expected system behavior.

Additionally, observations regarding unavailable or non-applicable functionalities were documented appropriately. The assignment demonstrates fundamental quality assurance practices including test case preparation, exploratory testing, result documentation, and analytical evaluation of a web application.

Table of Contents

Acknowledgments	ii
Abstract	iii
Test Cases	1
Conclusion	i

Test Cases

Test Case ID	Scenario	Steps	Expected Result	Actual Result	Status
HOMEPAGE					
TC_HP_01	Page Load & Layout	1. Navigate to https://safora.se/en/ 2. Observe the page load.	The page loads successfully without noticeable delays or layout shifts.	Page loads successfully; the hero video (safora-hero-optimized.mp4) auto-plays in the background.	Pass
TC_HP_02	Broken Images	1. Scroll through the homepage. 2. Inspect all image elements.	All images (client logos, About Us images, industry thumbnails) load successfully	All visible images load correctly without broken elements.	Pass

			with no broken links.		
TC_HP_03	Button Functionality	1. Click the "Book a Demo" button.	The button redirects the user to the scheduling platform.	User is redirected to https://cal.com/irusri in a new tab (target="_blank").	Pass
TC_HP_04	Text Readability	1. Review text contrast on the hero banner and feature sections.	Text should be easily readable against the background (e.g., white text on dark video).	Text contrast is sufficient; CSS handles dark/light backgrounds properly.	Pass
NAVIGATION BAR					
TC_NAV_01	Menu Links	1. Click "About Us", "Blog", and "Contact Us" in the header.	Links successfully route to their respective pages	Navigation links correctly redirect users to their respective sections/pages without broken routes or errors.	Pass

			without 404 errors.		
TC_NAV_02	Logo Redirect	1. Click the Safora logo in the top-left corner.	The logo redirects the user back to the homepage.	The logo <a> tag correctly points to https://safora.se/en/.	Pass
TC_NAV_03	Dropdown Menus	1. Interact with the "Features" navigation item and verify submenu items appear correctly.	A dropdown menu appears displaying all feature links.	Submenu expands to display Dashboard, Hazard Management, etc.	Pass
PRODUCT PAGES (SaaS Features)					
TC_PROD_01	Feature Images/Icons	1. Navigate to the "EHS Software Features" section.	Appropriate icons and visual representations load for each feature.	SVG icons load correctly inside the vertical navigation pills.	Pass

TC_PROD_02	Details Visibility	1. Click through the "Hazard Management", "Incident Management", etc. tabs.	Content updates dynamically on the right side to explain the specific feature.	Bootstrap .tab-pane classes successfully toggle visibility without reloading the page.	Pass
TC_PROD_03	Add to Cart	1. Attempt to add a product to a cart.	Item is added to cart.	N/A - Safora is a SaaS platform requiring a booked demo. There is no direct "Add to Cart" functionality.	N/A
TC_PROD_04	Price Display	1. Check for product pricing.	Prices are clearly displayed.	N/A - Pricing requires contacting sales or navigating to a separate (commented out) pricing page.	N/A
SEARCH FUNCTION					
TC_SRCH_01	Valid Search	1. Enter "Work Permit" into the search bar.	Search results display relevant pages.	N/A - Search functionality is currently unavailable on the UI.	N/A

TC_SRCH_02	Invalid Search	1. Enter "xyz123" into the search bar.	"No results found" message is displayed.	N/A - Search functionality is currently unavailable on the UI.	N/A
TC_SRCH_03	Empty Search	1. Leave the search bar empty and press Enter.	The page reloads or prompts the user to enter a term without crashing.	N/A - Search functionality is currently unavailable on the UI.	N/A
CART / CHECKOUT					
TC_CART_01	Add / Remove Item	1. Add item to cart. 2. Remove item from cart.	Cart updates to reflect additions and removals accurately.	N/A - No e-commerce cart system exists on this site.	N/A
TC_CART_02	Quantity / Price	1. Increase item quantity in cart.	Total price updates dynamically.	N/A - No e-commerce cart system exists on this site.	N/A

CONTACT US FORM

TC_CONT_01	Required Fields	1. Go to Contact page. 2. Leave required fields blank and click Submit.	Form throws validation errors (e.g., "This field is required").	Validation behavior could not be fully verified during testing.	Pending
TC_CONT_02	Invalid Email	1. Enter "test@.com" in the email field. 2. Click Submit.	Form prevents submission and shows "Invalid email format" error.	Email validation requires further functional verification.	Pending
TC_CONT_03	Lead Submission	1. Fill out all fields with valid data.	User sees a "Success / Thank You" message.	Backend form submission could not be fully tested without server-side access.	Pending

		2. Click Submit.			
MOBILE RESPONSIVENESS					
TC_MOB_01	iPhone Size Layout	1. Set viewport to 375px (iPhone). 2. Scroll the page.	Layout adjusts; columns stack vertically; no horizontal scrolling exists.	Elements stack correctly. Feature tabs move from side-by-side to top-to-bottom.	Pass
TC_MOB_02	Tablet Size Nav	1. Set viewport to 768px (Tablet). 2. Check the header.	Desktop menu hides, replaced by a clickable hamburger menu icon.	Media query <1199px hides .rs-header-menu and shows .rs-header-hamburger.	Pass
TC_MOB_03	Button Overlap	1. Check all CTAs on mobile/tablet viewports.	Buttons remain clickable with adequate padding and do not overlap text.	Padding and margin adjustments in @media queries keep buttons separated. Chatbot widget is also repositioned.	Pass

TC_MOB_04	Text Size	1. Check hero text and paragraphs on mobile.	Text is not too small to read and does not overflow its container.	Font sizes dynamically scale down.	Pass

Table 1: Test Cases

Conclusion

The Safora website was evaluated through exploratory manual testing techniques to assess its functionality, responsiveness, and usability. Overall, the website demonstrated stable performance and proper functionality across the tested areas.

The testing process helped identify implemented features, validate user interactions, and document areas where functionality was either unavailable or required backend verification. This assignment provided practical experience in software quality assurance processes and strengthened understanding of structured testing methodologies.
